

## Pantomics Economic Imaging System.

The imaging system has a Nikon Coolpix 8400 digital camera (8 megapixel). In addition to all the original Nikon Coolpix accessories, Pantomics provides a power AC adapter, software for image capturing, and the necessary adapters for the trinocular heads of many models of Nikon and Olympus microscopes.

If you do not have a trinocular microscope head, the system can also be plugged into one of the eyepiece tubes of your microscope (adapters are included for either 25mm or 30mm tube; see the lower picture on the left). Through the included USB cable it is easy to connect the camera to your computer

After installation of the image software, you can focus (real time), adjust and capture images from your microscope. Pictures on the right are examples captured by the system, top – H&E stained prostate, middle – IHC ER staining in a breast carcinoma and lower - H&E stained colon carcinoma.
