

Cat No: **LVC962 - Liver cancer tissue array**

Lot#	Cores	Size	Cut	Format	QA/QC		
LVC96201	96	1.5mm	4um	8X12	H&E, anti-Vimentin/Cytokeratin		

**Recommended applications:** For Research use only. RNA or protein liver cancer/non-tumor tissue profiling using IHC or ISH; Antibody characterization.

**Description:** Liver cancer tissue array, 96 cores, non-overlapping with LVC961, including 36 cases (purple/blue) of liver cancers and 12 cases of normal, hepatitis and cirrhosis liver tissues (pink) in duplicates. All the tissues were from surgical resection. They were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or APES coated Superfrost slides. They all have a guaranteed six months' shelf-life at 4C from the date of shipment. Each slide has >95% tissue core retention.
