

Cat No: LYM1503 – T cell Lymphoma tissue array

Lot#	Cores	Size	Cut	Format	QA/QC		
LYM150301	150	1.1mm	4um	10X15	H&E, IHC anti-LCA		

Recommended applications: For research use only. RNA or protein analyses using IHC or ISH suitable for T cell lymphoma tissue profiling.

Description: Lymphoma tissue array, set 3, T-cell lymphoma, 150 cores from reactive lymphoid tissues (5 cases) and various T-cell lymphoma (68 cases) tissues in duplicates.

All the tissues were from surgical resection. They were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or APES coated Superfrost slides. They all have a guaranteed six months' shelf-life at 4C from the date of shipment.

Notes: Bake at 60C for 30 minutes before use. If antigen retrieving is needed, it is always a good idea to start with a protocol with weak to mild strength. For IHC related information on products that provide them, please contact us at info@pantomics.com for the most up-to-date information
