Lot#	Cores	Size	Cut	Format	QA/QC	Pantomics, Inc.	
PAC96101	96	1.5mm	4um	12X8	H&E, IHC anti-Cytokeratin		

Recommended applications: For Research use only. Designed for IHC or ISH based protein or RNA tissue profiling in evolution and progression of pancreas cancers.

Description: Pancreatic cancer tissue array, 96 cores, 48 cases from normal, various benign and malignant tumor tissues with progressive grades and TNM stages in duplicates.

All the tissues were from surgical resection. They were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or APES coated Superfrost slides. They can be stored for use at 4C for up to six months from the date of shipment. **There may be 5 to 10% of tissue core loss.**

Notes: Bake at 60C for ~60 minutes before use. If antigen retrieving is needed, it is important to avoid **direct-boiling and high pH or high strength** antigen retrieving buffer. For availability of complimentary IHC data, please contact us at info@pantomics.com.
