

Cat No: CVD231 – Cardiovascular disease tissue array

Lot#	Cores	Size	Cut	Format	QA/QC		
CVD23101	23	2.5mm	4um	4X6	H&E, IHC anti-CD34		

Recommended applications: For research use only. RNA or protein tissue profiling using IHC or ISH suitable for blood vessel or endothelial cell related studies.

Description: 23 cases of normal, reactive and neoplastic cardiovascular conditions. Designed for blood vessel or endothelial cell related studies.

All the tissues were from surgical resection. They were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or APES coated Superfrost slides. They can be stored for use at 4C for up to six months from the date of shipment. **There may be 5 to 10% of tissue core loss.**
