

Cat No: **SKT1501** – Skin tumor tissue array

Lot#	Cores	Size	Cut	Format	QA/QC		
SKT150101	150	1.1mm	4um	10X15	H&E, IHC anti- Cytokeratin		

Recommended applications: For Research use only. RNA or protein skin tumor tissue profiling using IHC or ISH; Antibody characterization.

Description: Skin tumor tissue array, 150 cores containing 22 cases or normal, inflammatory and benign tumor, and 53 cases malignant tumors in duplicates, from skin, nasal cavity and subcutaneous lymphoid tissues.

All the tissues were from surgical resection. They were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or APES coated Superfrost slides. They can be stored for use at 4C for up to six months from the date of shipment. **There may be 5 to 10% of tissue core loss.**

Notes: Bake at 60C for ~60 minutes before use. If antigen retrieving is needed, it is important to avoid **direct-boiling and high pH or high strength** antigen retrieving buffer. For availability of complimentary IHC data, please contact us at info@pantomics.com.
