

Cat No: SKT962 – Skin tumor tissue array with progressive changes

Lot#	Cores	Size	Cut	Format	QA/QC		
SKT96201	96	1.5mm	4um	12X8	H&E, IHC anti-Cytokeratin		

Recommended applications: For Research use only. RNA or protein skin tumor profiling using IHC or ISH; Antibody characterization.

Description: Skin tumor tissue array, set 2, non-overlapping with SKT961, 96 cores, 48 cases from normal, premalignant and cancer tissues with progressive grades and stages in duplicates.

All the tissues were from surgical resection. They were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or APES coated Superfrost slides. They can be stored for use at 4C for up to six months from the date of shipment. **There may be 5 to 10% of tissue core loss.**

Array Position	Sex	Age	Anatomic Site	Pathology	Grade	Stage
A01	M	43	Skin, scalp	Normal	null	null

Advancing Biomedical Science Through Tissue Arrays

Notes: Bake at 60C for ~60 minutes before use. If antigen retrieving is needed, it is important to avoid **direct-boiling and high pH or high strength** antigen retrieving buffer. For availability of complimentary IHC data, please contact us at info@pantomics.com.
