

**Cat No: TET1021 - Testis tumor tissue array**

Lot#	Cores	Size	Cut	Format	QA/QC	Pantomics, Inc.	
TET102101	102	1.5mm	4um	8X13	H&E, IHC anti-Cytokeratin		

**Recommended Application:** For research use only. Designed for IHC or ISH based protein or RNA tissue profiling in various testis tumors.

**Description:** Testis tumor tissue array, set 1, containing 69 cases of testis germ cell tumors, 18 cases of non-tumor testis tissues and 15 cases of primary testis lymphoma. 75 of the 102 cases overlap with those of TET1022.

All the tissues were from surgical resection. They were fixed in 10% neutral buffered formalin for 24 hours and processed using identical SOPs. Sections were picked onto Superfrost Plus or APES coated Superfrost slides. They can be stored for use at 4C for up to six months from the date of shipment. **There may be 5 to 10% of tissue core loss.**

**Notes:** Bake at 60C for ~60 minutes before use. If antigen retrieving is needed, it is important to avoid **direct-boiling and high pH or high strength** antigen retrieving buffer. For availability of complimentary IHC data, please contact us at [info@pantomics.com](mailto:info@pantomics.com).
